Service Mobile

Easy waterfilling

The Service Mobile from GNB Industrial Power makes water filling on truck and starter batteries considerably easier.

The service mobile can be used for manual replenishing of single cells in the battery by means of a filling gun. All you have to do is insert the filling gun

into the cell. The handle is now activated and water is being replenished.

A signal lamp will tell you when the correct amount of water has been reached. After that the next cell is filled, etc.

When the filling gun is removed you can quickly and automatically replenish your

batteries if you have mounted a BFS water filling system on the battery.

The remaining connection is connected to the water system connection. The service mobile now automatically replenishes the battery with the correct amount of water.

The integrated battery (and charger) provides free access.

Dimensions

- > **Width** 55 cm
- > **Depth** 45 cm
- > **Height** 110 cm
- > **Weight** (without water) 35 kg
- > **Connection** 1 phase, 1 x 230 V

At delivery the service mobile is equipped with a 60 litre water tank.

Exide Technologies, with operations in more than 80 countries, is one of the world's largest producers and recyclers of lead-acid batteries. Exide Technologies provides a comprehensive and customized range of stored electrical energy solutions. Based on over 100 years of experience in the development of innovative technologies, Exide Technologies is an esteemed partner of OEMs and serves the spare parts market for industrial and transportation applications.

GNB Industrial Power – A division of Exide Technologies – offers an extensive range of storage products and services, including solutions for telecommunications systems, railway applications, mining, photovoltaic (solar energy), uninterruptible power supply (UPS), electrical power generation and distribution, fork lifts and electric vehicles.

Exide Technologies takes pride in its commitment to a better environment. Its Total Battery Management programme, (an integrated approach to manufacturing, distributing and recycling of lead-acid batteries), has been developed to ensure a safe and responsible life cycle for all of its products.
